

## Expanding the Donor Pool Through Utilization of Perceived Marginal Organs

### Purpose:

The ongoing disparity between the number of candidates on the national waitlist and the number of organs being transplanted continues to be a critical issue for the transplant community. This has resulted in innovative organ offer approaches and practices to expand the donor pool through inclusion of organs that would otherwise be discarded. This webinar will focus on the use of donors identified with a transmissible infection specifically, HIV and Hep C positive organs.

### Objectives:

At the end of the webinar, participants should be able to:

- Describe the impact of utilizing HIV positive donors to improve organ utilization and expand the donor pool.
- Discuss the implications of utilizing HIV positive donors in living donation.
- Identify next steps for HIV donors with respect to future practices and innovative approaches.
- Distinguish the different types of Hepatitis C organ offers.
- Explain the impact on waitlist time and transplant rate for programs who have started taking Hep C NAT positive organs for NAT negative recipients.
- Outline the financial considerations for accepting Hep C NAT positive organ for NAT negative recipients.

### When:

Tuesday, July 14, 2020  
2-3pm ET / 11am-12pm PT

### Speaker(s):

#### Dory Segev, MD PHD

Marjory K. and Thomas Pozefsky  
Professor of Surgery and Epidemiology,  
Associate Vice Chair, Dept of Surgery,  
Director, Epidemiology Research Group  
in Organ Transplantation  
Johns Hopkins University

#### Heather O' Dell MSN, ANP-BC, NEABC, MMHC

Advanced Practice Nurse Manager,  
Abdominal Transplant  
Vanderbilt Transplant Center

### Target Audience:

Administrators • Coordinators •  
Physicians • Nurses • Surgeons •  
Managers • Quality Improvement •  
Social Workers • Other Donation and  
Transplantation Professionals
