

Organ Donation and Disease Transmission

When:

Tuesday, September 22, 2020
2pm-3pm ET / 11am-12pm PT

Speaker(s):

Marian G. Michaels MD, MPH, FAST
Professor of Pediatrics and Surgery in
the Division of Pediatric
Infectious Diseases
University of Pittsburgh, UPMC
Children's Hospital of Pittsburgh

Target Audience:

Administrators • Coordinators •
Physicians • Nurses • Surgeons •
Managers • Quality Improvement •
Social Workers • Other Donation and
Transplantation Professionals

Purpose:

During this webinar, we will review the types of diseases that can be spread to recipients through organ transplantation with emphasis on the concept of anticipated transmissions vs. unanticipated transmissions. While disease transmission from a donor to a recipient mostly stems from infections, malignancies can also be quite impactful. Join us to hear from a leading expert in the field to learn more about disease transmission and the significant impact that the COVID-19/SARS-CoV2 pandemic has had on organ donation.

Objectives:

At the end of the webinar, participants should be able to:

- List two examples of expected disease transmissions and two examples of unanticipated disease transmissions.
- Describe advantages and disadvantages of different testing methods for possible disease transmissions.
- Design a plan to evaluate donors for SARS-COV2 testing.
